The Royal National Institute for the Blind

SEVENTY-SIXTH REPORT

As Chairman of this Institute, one fact of which I am always deeply conscious is that our ability to help the blind is in direct proportion to the support which you, the public, accord us. In this review of our activities during the last financial year you will, I am confident, find much to merit that support.

Many of the services which we are privileged to provide have for long constituted the very corner-stone of British blind welfare and these have, during the year, been systematically both expanded and reinforced. It is, therefore, with a sense of achievement that we regard both the four hundred newly blind men and women who, through our rehabilitation centres, have found new hope and confidence for the future and the three hundred trained blind for whom we have been enabled to find employment in industry and commerce. Satisfactory, too, is the total of over six hundred thousand volumes of Braille literature and music which our printing presses have produced.

But, although old in experience, the R.N.I.B. is young in heart and our researches into the employment of new techniques, new developments and new materials never cease.

In this one year a revolutionary Talking Book machine, embodying the most modern tape-recording methods, has been evolved; an audible ball, simple in itself but of considerable value to blind youth and utilising the latest electronic advances, has been invented; a new method of printing braille, designed to reduce considerably both the bulk and production cost of these prized volumes, has been developed.

All this and more besides has, once again, entailed an expenditure far in excess of one million pounds, but to the blind among us the benefit has been incalculable. That your support should enable us to play this vital role in the lives of those without sight is, to us, a source of quiet pride.

GODFREY ROBINSON

Chairman.

*Approximately one person in every five
hundred in Britain is blind . . .*

*. . . these are the members of our community
whom the R.N.I.B. exists to serve.*

United Service

Britain may justifiably be proud of her acknowledged leadership in the field of blind welfare, for without humanity no country can be truly great. Nor does this position result from the devoted efforts of a few warm-hearted individuals.

On the contrary, there are indeed no fewer than two hundred voluntary organisations for the care of the blind in this country, each working in complete harmony with appropriate Government Departments and Local Authorities towards the perfection of this welfare pattern. Of these, the great majority work within a limited, local area and provide that intimate, personal, day-to-day relationship so vitally important to those who do not see.

Within this general scheme The Royal National Institute for the Blind plays its own important role. By the provision, on a nation-wide basis, of a host of specialised services which are available to every registered blind man, woman and child in Britain, it supplements both Government and local voluntary effort to help to create a national pattern of blind welfare unequalled anywhere in the world.

Founded over ninety years ago, the R.N.I.B. has pioneered many experimental projects which are today accepted as standard practice in blind welfare and has, throughout this period, consistently enlarged both the number and the scope of its services to the blind. Today, its schools and colleges, its training centres and placement service, its homes and hostels and its astronomical production of braille literature and music all play a valuable part in helping to compensate, in some degree, for lack of vision.

But as important as these established services is the unquenchable pioneering spirit which has characterised our Institute throughout its long life. Never for a moment does our research department cease to explore new means by which the handicap of blindness may be still further reduced. And, because British blind welfare is essentially a matter of co-ordinated effort, our help and advice and our wealth of experience in the especial needs of those without sight are at all times freely available to any organisation which may care to avail itself of them.

So does the R.N.I.B.—the largest organisation of its kind in the world—strive to maintain the traditions of its founder, Doctor Thomas Rhodes Armitage, that great Victorian humanitarian, whose epitaph reads so simply:—"Friend of the blind."

A pile of one pound notes . . .

*twice the height of the Nelson Column
is what we spent this year.*

Payments under unification and grants to other societies **£209,434**

Braille production, apparatus and Talking Books **£257,144**

Grammar and special schools and Sunshine Homes **£232,323**

Higher education, rehabilitation, training and employment **£124,802**

Tobacco and confectionery kiosks and home-workers scheme **£203,903**

Hostels for students and Homes for the elderly **£115,769**

Capital expenditure on new projects and expansion **£123,447**

General assistance, miscellaneous services and central administration **£70,324**

. . . and the total came to £1,337,146

THE FRIEND IN NEED

When we are young

The eyes of youth look forward, for theirs is the world of tomorrow. Our children are our country's heritage and upon the adult lies the responsibility to guide, to train and to help—but never to coerce—these young minds towards maturity.

Particularly is this so in the case of children who must learn to 'see' by means other than conventional sight—whose remaining senses must be developed to take the place of eyes enwrapped in darkness. For this reason, the care and education of blind children has for long been an especial consideration of our Institute and its Sunshine Home Nursery Schools and advisory service to parents ensure that, in Britain today, the young blind child shall be at no educational disadvantage with his sighted companion.

For those up to the age of about seven, the Sunshine Homes provide, in the affectionate, happy atmosphere of a large and cheerful family, the unhurried days, the specialised knowledge and the wealth of experience which enable enquiring minds to explore the world about them. Instruction and play go hand-in-hand and the visitor is struck by the never-ending stream of questions by which the children seek to learn. Nor are the children the only ones to gain confidence from these schools. Parents, too, whether on regular visits or staying awhile at the special Parents' Unit in the grounds of the school at Abbotskerswell, learn much that is helpful by discussion with the sympathetic staff and by watching their own child fearlessly playing his part in this bustling miniature community.

Burdens bravely borne

Two of these schools are devoted to the care of young blind children with handicaps additional to blindness, many of whom transfer, when old enough, to Condover Hall, near Shrewsbury. Here, the Institute looks after seventy-two boys and girls, the majority between the ages of 9 and 16, for whom blindness is but one of multiple physical or mental disabilities. Because of the grievous burdens which these children bear, the attainment of some degree of mental and physical independence remains, for most, the hallmark of the school's success. Nevertheless, the prevailing mood is one of cheerful striving and an absorbing interest in day-to-day events. During this year a source of constant curiosity has been the progress of the new heated, covered swimming pool and its completion has been eagerly awaited by these youngsters anxious to adventure in this exciting element. A second building project, separate from the main school, but within the spacious grounds, has been the construction of the new Deaf-Blind Unit known as "Pathways," nearly half of the cost of which was so generously donated by the Variety Club of Great Britain. This, a tribute to the success of our experimental Unit initiated seven years ago, has, in fact, since been opened and can accommodate fifteen children for whom the world is as silent as it is dark, but for whom love, allied to a wealth of experience, will help to broach the double barriers.

On the threshold

A number of those children who begin their school life in our Sunshine Homes complete it at one or other of our two Grammar Schools. These, Worcester College for Boys and Chorleywood College for Girls, continue the educational pattern in an atmosphere closely akin to that of a sighted

They want to find out why the wheels won't go round at a Sunshine Home

Courtesy Birmingham Post and Mail

Public School. At neither is undue emphasis given to the fact that the pupils are educationally blind. Each school, on the contrary, strives to prepare these young people for the university and professional future which lies ahead.

Typical of the sturdy self-reliance and integration into the sighted world which these boys and girls acquire was the trip to Wales by some of the boys from Worcester College, during which they scaled a 2,000 ft. high mountain peak, and the unaccompanied travels of the winners of three Leverhulme Trust Fund Travel Scholarships. One of these crossed to France to attend an International Festival of Drama at Avignon and later a University Course at Nice, a second journeyed to Sweden to stay with Swedish friends, while the third joined a party from Birmingham University to holiday at Heidelberg. So, too, at Chorleywood, where the Debating Society has joined in friendly contest with those of a number of sighted schools within the county and where at Christmas a pantomime, the words and music of which were written entirely by the girls, was performed with great success.

In bidding adieu to Mr. B. O. Bradnack, M.C., M.A.(Oxon.), for 21 years Headmaster of Worcester College, and in recording our appreciation of his whole-hearted dedication to the well-being of the boys who came under his care, we welcome Mr. R. C. Fletcher, M.A., in succession, confident that under him the school will maintain the high standard that has always been its pride.

The R.N.I.B. is concerned with the education of blind youth not only by the provision of schools, but also by the promotion of research in this field. An important recent example has been the development of equipment which will increase the number of practical scientific experiments that can be undertaken without the help of sighted assistants, so widening the opportunities for science teaching in schools for the blind. One example of this research, which is still in its early stages, is a piece of apparatus which converts light sequences into sound sequences through a photo-electric cell, making it possible to measure the direction and intensity of a light beam. This device is so sensitive that, by noting a change in sound frequency, a blind person can detect changes of colour in liquids, or follow the direction of a thin dark line on a light coloured background.

Through the provision of grants, the Institute has supported the four-year research project undertaken by Dr. B. R. Gomulicki at the Cambridge Institute of Education into the "Basic Learning Capacities of Blind Children". In addition, the Institute's close association with the Research Committee of the College of Teachers of the Blind has resulted in the co-ordination of many pieces of research, and has continued to provide the opportunity for bringing together those concerned with various aspects of blind education.

Mending broken lives

Many of those to whom blindness comes in adult life find themselves in need of education of a different kind. The problem of how to live without sight in a sighted world is one which must be faced and which can be paralyzing in its stark reality.

It is for them that the Institute maintains its rehabilitation centres at Torquay and at Bridgnorth—centres at which, because the Principals and a high proportion of their staff are themselves blind, they find a realistic understanding of their fears and doubts and a challenge to their bitter self-commiserative moods. Here, they discover a classless society in which acquired ability is the sole badge of a man's worth and in which the high and the low, the rich and the poor, the white and the coloured are each anxious to learn, one from the other, the new techniques which all must master.

This year four hundred such men and women have found new confidence at these centres and many have gone forward for training which will ensure their financial as well as physical independence. Of these, a number have been admitted to the R.N.I.B. Training College for Blind Short-hand-Typists and Telephonists and upon completion of their courses will be found employment in industry or commerce. Others, whose inclinations or abilities have indicated that in light engineering they would find their greatest satisfaction, have taken a course at the Government Training Centre at Letchworth and they, too, may contemplate a satisfying, rewarding life among colleagues who respect their new-found skill.

At Torquay, simple light engineering helps residents to regain manual dexterity and staff to assess abilities

Placed by our Employment Service, this girl works in the Ipsophone Room of a busy London office

Courtesy Imperial Chemical Industries Ltd.

It says much for the high standard of training given and the care taken to select the right man for the right job, that the blind worker is his own best ambassador. This, though, merely serves to emphasise the fact that to the Officers of our Employment Department is due in no small measure the growing awareness among employers that the trained blind man or woman is a first-rate economic proposition. It is to their credit that, in this one year, they have successfully found employment for one such potential worker for each working day.

Skilled hands that heal

Of all the training establishments which the Institute maintains, perhaps its School of Physiotherapy—the only one of its kind in the Commonwealth—is the one of which it may most justifiably be proud. For in no other country in the world is the blind physiotherapist so completely on a par with his sighted fellow practitioners. A team of past students of the School who in the Autumn attended the World Confederation of Physical Therapy in Paris, and who demonstrated electrotherapy and exercise techniques, deeply impressed both doctors and physiotherapists in the audience, as did an exhibition of the many pieces of apparatus which the British blind physiotherapist is qualified to use.

This year a further step towards achieving absolute equality has been taken by the perfection of means whereby the blind physiotherapist may now carry out an electrical muscle test without the assistance of a sighted colleague. All students leaving the school are now trained in this latest technique and, of the eighteen who qualified this year all, with the exception of one who entered private practice, have obtained appointments in hospitals under the National Health Service. So is the gap between those who see and those without sight steadily diminished.

Research rewarded

In its determination that the blind shall be enabled to enter fully the life of the community in which they live, the R.N.I.B. gives high priority to the exploration of new techniques, the development of new apparatus and the continual improvement of existing aids by means of which the handicap of blindness may be more fully overcome.

To the elderly and the house-bound blind, the Talking Book has for many years provided a wealth of companionship and entertainment poignantly reflected in the many appreciative letters from blind “readers” which this Institute receives. The list of recorded titles in this library now numbers over 700, and the circulation figure

Totally blind Physiotherapy student working in a hospital ward on a patient receiving a venous drip

for this one year reached the record total of considerably more than two million individual discs.

But, valuable as this service is, it is about to be improved. During this period, some twenty years research has been brought to a successful conclusion with the development of a revolutionary method of recording and playing-back these books on tape. The heart of the new Talking Book machine is the cassette, in which the tape is housed. Of approximately the dimensions of a moderate letterpress novel, it will provide up to twenty hours of recorded material. This has been achieved by the use of half-inch tape and recording on it not two tracks, as on domestic tape recorders, but no fewer than eighteen. The blind of Britain will be the first of any country in the world to benefit from this advance in multi-track recording.

Simplicity of production and of operation, almost complete elimination of the risk of damage to the recordings coupled with a virtually indestructible quality of reproduction, a substantial saving in production costs and a considerable reduction in the weight of recorded volumes are among the many advantages of the new system. Of perhaps even greater importance to the "readers" is the fact that, whereas by the present method some eighteen months might elapse before a "best seller" reaches them,

it will now be possible to reduce this period to one of an equivalent number of days.

Naturally, the two systems, disc and tape, must for some time be operated in parallel, but gradually the new will replace the old, valued machines which have so usefully served their purpose.

A further example of prolonged research which in this year has progressed substantially towards a successful solution is provided by the Audible Playing Ball. All such balls so far developed have been based upon the concept of a hollow ball containing small objects, such as dried peas, which rattled as the ball was bounced. All suffered from the disadvantage that, when at rest, the ball ceased to sound.

The new ball, at present undergoing intensive tests, consists of a small electronic sounding unit housed in sponge rubber within an outer casing. Powered by a miniature accumulator, rechargeable from a dry battery, this emits a "bleeping" sound continuously for up to ten hours on one charge. The built-in on/off switch is so designed as not to interfere with true bounce. Simple though such an object may appear to those with sight, it will fill a long-felt want in the lives of blind children and, it is hoped, enable them to add both cricket and football—those twin national pastimes—to the growing list of sports in which they now take part.

The new Talking Book machine, with tape cassette in position, which will gradually replace current disc models

Within the educational field, the Institute has for long sought new means of making embossed maps and diagrams more intelligible to exploring fingers. Although the concept of incorporating well-defined varying textures to represent individual different categories of area, such as sea and mountain, is not new, the process has never before lent itself to quantity reproduction and each map or diagram had to be purpose made. Now, however, that the vacuum-forming process of plastics has become an accepted production technique, the R.N.I.B. has invented and patented a method of producing moulds with intricate texture patterns which will revolutionise map representation for the blind. Thus will the schoolboy in his geography class and the adult anxiously consulting his embossed street map both gain a more exact understanding of their surroundings.

The production of braille literature and music has, since its inception, remained a matter of paramount importance to the Institute. Without an adequate supply of books and periodicals to enliven leisure hours, to instruct the student and to chronicle the events of history in the making, the world of the blind would indeed be one of darkness. In this one year our braille presses have printed 485,200 newspapers and periodicals, 1,405 volumes of music, 59,655 volumes of literature and 54,391 music and literature pamphlets—a grand total of over 600,000.

But here again, success is not enough. Improvements have been made. After a number of years of trial and error, of experiment and testing, a new method of printing these vitally important volumes has been evolved. Possessing a number of basic advantages, the new process consists of baking a solid dot of plastic ink on to the surface of the paper in place of the familiar hollow dot formed by distorting the fibres of the material. Because the process will prove both quicker and cheaper than the conventional method, we shall be able to increase our output and because the dot is uncrushable and can be printed on thinner paper, thus reducing the bulk of a braille volume by almost one half, the process will prove a boon to our readers.

By such means and by the production of over 250 aids and items of specialised equipment—ranging in scope from such humble helps as self-threading needles and safety bread-cutting boards for the housewife to braille-marked precision gauges for the skilled industrial worker—does our Technical Research Department play its part in making our Institute “the helping hand to all Britain’s blind”.

The tiny dots of Braille provide the key to all that is best in literature and music

They too may read

Not all of those who must read by touch are able to master the intricacies of the braille alphabet. Many of the elderly blind and those whose fingers have lost their accustomed sensitivity find the tiny dots too difficult to decipher.

For them—and because, of the twelve thousand men and women whose names are annually added to the register of blind persons, some three-quarters are over the age of sixty—we have continued to produce a wide variety of literature in the simpler, more easily decipherable Moon alphabet. To enable this increasing demand to be met, our Moon printing works this year transferred, after over a century of continuous occupation, from its original site in Brighton to new, more commodious premises at Reigate, Surrey. Here, with new machinery and a more efficient production line, this year's record periodical circulation figure will soon be substantially surpassed. To many thousands of blind people, not only in this country but throughout the world, will flow an even greater selection of all that is best in the world of literature.

Books for the student

Of equal importance to these mechanically produced volumes is the library of 25,000 braille textbooks on many subjects which the Institute maintains at its Headquarters in London. All have been painstakingly embossed by hand and to the blind student and the young man or woman anxious more fully to qualify in a chosen career, their value is inestimable. It is due to the devoted labours of nearly 250 voluntary transcribers, who consistently give so freely of their energies and special knowledge, that nearly 1,000 volumes are added annually to this unique store of knowledge. Proof, if such were needed, of the complete integration of the blind into the sighted world and of the appreciation which this meticulous work elicits from those in search of knowledge, is provided by the fact that no fewer than 148 new readers have this year joined the library and that the circulation figure substantially exceeded twelve thousand volumes.

The British delegation to the General Assembly of the World Council for the Welfare of the Blind, Rome

" The cup that cheers " in the lounge of one of our Homes for the elderly blind

The Manuscript Department of the library has continued to undertake the brailing of a wide variety of material at the request of individuals and organisations, ranging in scope from a set of examination papers for blind Jamaican children to the Oxford Psalter, with all the pointing, for a blind organist and choirmaster in this country.

World of no frontiers

In perhaps no other walk of life are the prevailing international tensions, jealousies and suspicions so completely absent as in the field of blind welfare. Almost without exception, organisations for the blind of every country work harmoniously towards their common goal of bringing fuller, more satisfying lives to the blind of every nation and the R.N.I.B., the largest organisation of its kind in the world, is proud of the part which its long experience enables it to play in this world-wide effort.

The second General Assembly of the World Council for the Welfare of the Blind took place, during this year, in Rome. A Paper on the rehabilitation, training and placement of the blind, read by the Warden of our Rehabilitation Centre at Torquay, was agreed by delegates from nearly fifty countries to have been one of the outstanding contributions to the Conference, as was a report by Mr. John Colligan, our Secretary-General, on the adaptation of light-operated telephone switchboards for use by blind operators. Mr. Colligan, relinquishing his Chairmanship of the Technical Committee of the World Council to an American colleague, was elected Chairman of the Professional and Urban Employment Committee and re-elected to the Council's Executive Committee. Our International Correspondent, Mr. John Jarvis, himself a blind man, was elected Secretary-General of the World Council, a post which has been held in the United States since 1951 when the Council was created.

Of particular interest during this period was the reaching of an agreement whereby, under the auspices of the British Council, delegations from this Institute and from the All-Russian Society of the Blind would exchange visits so that each might learn at first hand something of the blind welfare schemes operated by the other. Our delegation, consisting of our Chairman, Mr. Godfrey Robinson, Mr. Colligan and our Education Officer, has, in fact, since returned, having travelled some ten thousand miles in its search for new ideas which might be put into operation in this country. The Russian delegation is expected to visit us in the Autumn of 1960.

At home, we welcomed visitors from many lands who came to learn how best the British system of blind welfare might be adapted to the needs of their fellow countrymen. Some have called for a discussion lasting perhaps an hour or two; others, attending a course of training, have been with us much longer. All have been deeply impressed by what they have learned and have carried back to their own countries new hope for many thousands of men and women of diverse creeds and colours. Thus does humanity triumph over man-made boundaries.

New friends

As is only to be expected, the close co-operation which exists between countries widely spaced is found to an even greater degree within our own isles. It is now almost exactly one year since agreement was reached between ourselves, the National Library for the Blind and certain voluntary organisations for the blind in Scotland whereby a number of unified collecting schemes would be operated in that country through a newly opened Branch Office of this Institute in Stirling.

Designed equally to acquaint still further the general public with the many services which are provided for the blind in Scotland, to avoid overlapping appeals and to reduce to a minimum collecting costs, the venture has proved a resounding success. Conscious only of their mutual desire to be of service to those who cannot see, the organisations concerned have achieved a unanimity of purpose not always to be found among those who strive to a common end. Certain it is that the blind of Scotland have benefited from this collaboration and that we, for our part, have welcomed the opportunity to expand still further the national characteristic of our welfare scheme.

The beginning and the end

No pattern of welfare would be complete which did not make special provision both for those about to embark upon their chosen careers and those who, in middle or later life, seek to combine the comfort of a family home with the friendship of companions who, like themselves, indulge a wide range of interests and leisure occupations.

At the three London hostels which the Institute administers, students and young workers enjoy all the benefits of a happy, comfortable home life allied to the congenial companionship which, at this stage of life, is so vitally important. Because, though blind, they live and work among the sighted, these young people have an astonishing range of leisure pursuits. Teams of athletes visit our Grammar Schools in friendly tournament; swimming, dancing and skating all claim their devotees; some, indeed, have recently attended fencing classes and, though their instructor may sometimes have been scandalised at quite unconventional thrusts and parries, all appear to have enjoyed themselves enormously.

From our residential Homes, too, one learns of a surprising list of activities with which these elderly blind and deaf-blind men and women sustain themselves. From the Home in Somerset comes an account of a visit by some of the residents to the power station at Hinekley Point and of their absorbed interest in this scientific marvel; from another, we learn of a Harvest Festival held in aid of the World Refugee Fund; and yet again, of the German student who spent part of his summer holidays staying at one of these Homes to help in any way he could and of the tremendous interest which the residents displayed in anything he told them of his own country.

Not the least important aspect of these Homes is the opportunity which they afford for many hundreds of blind people each year to holiday by the sea, or at inland resorts, among understanding and welcoming friends. Facilities are made available for these guests to visit many places of local interest and staff and residents vie with one another to ensure that they shall derive the maximum of benefit and enjoyment from their stay.

These we thank

In this Report we have told you something of our striving to reduce the handicap of blindness. It remains, as it has always been, our aim to ensure that our blind friends and neighbours shall yet take their rightful place in a sighted world. They have, indeed, much to offer us in return for anything we do for them.

We like to feel that we have played our part in giving to many thousands for whom the world has grown dark the independence which they seek, the opportunity to live as happy, useful members of a contented community. But, thinking thus, we are deeply conscious of the untiring effort and unwavering encouragement of the many voluntary helpers who have sustained us in our endeavours. To them, it is our pleasure to record our grateful thanks and to assure them that without such help our task would be the harder and our ability to help the blind decreased.

We also record our deep appreciation of the services of our Secretary-General, Mr. J. C. Colligan, O.B.E., and his fine staff for their devoted labours during another year.

LEGACIES, 1959-60

We acknowledge with most grateful thanks the following benefactions by Will received during the year :

NOTICE TO ANNUAL SUBSCRIBERS

The Institute, being a Charity, is not liable to Income Tax, but you have to pay tax on the income out of which you pay your subscription. The Institute is allowed, under Income Tax law, to recover the tax paid by you in relation to your subscription, but only if you have signed the seven-year covenant on the back of this Notice. The following examples show how, by doing this, you can substantially increase the value of your contribution to our work:—

<i>Annual Subscription to be paid by subscriber</i>	<i>Income Tax (at 7/9 in £), recoverable by Institute from Inland Revenue</i>	<i>Total value of subscription to the Institute</i>
(1)	(2)	(3)
£ s. d.	£ s. d.	£ s. d.
10 0	6 4	16 4
10 6	6 8	17 2
1 0 0	12 8	1 12 8
1 1 0	13 3	1 14 3
2 0 0	1 5 4	3 5 4
2 2 0	1 6 6	3 8 6
3 3 0	1 19 10	5 2 10
5 5 0	3 6 5	8 11 5
21 0 0	13 5 8	34 5 8

In Column 1 look for the amount of subscription you usually make. (Let us take as an example £2).

Column 3 shows the amount of gross income (£3 5s. 4d.) you must receive to leave you with £2 after tax at 7s. 9d. in the £ has been deducted from £3 5s. 4d.

Column 2, which is simply the difference between Columns 1 and 3, shows the amount of tax deducted (£1 5s. 4d.) which the Institute can recover from the Inland Revenue, thereby increasing the value of your cash subscription of £2 to a total of £3 5s. 4d.

THE ROYAL NATIONAL INSTITUTE FOR THE BLIND

Incorporated by Royal Charter. Registered in accordance with the National Assistance Act, 1948

FORM OF BEQUEST, No. 1.

The following form of bequest is recommended to those who may be desirous of assisting the Institute by way of a specific legacy :—

I give to THE ROYAL NATIONAL INSTITUTE FOR THE BLIND, of 224, 226 & 228 Great Portland Street, London, W.1, the sum of.....pounds

(free of all death duties) for the general purposes of the Institute, and I declare that the receipt of the Hon. Treasurer for the time being of such Institute shall be a good discharge to my Executors.

FORM OF BEQUEST, No. 2

The following form of bequest is recommended if it is desired to leave the residue of an estate to the Institute :—

I give the rest residue and remainder of my estate and effects whatsoever and wheresoever both real and personal and whether in possession reversion remainder or expectancy to THE ROYAL NATIONAL INSTITUTE FOR THE BLIND, of 224, 226 & 228 Great Portland Street, London, W.I, for the general purposes of the Institute, and I declare that the receipt of the Hon. Treasurer for the time being of such Institute shall be a good discharge to my Executors.

NOTE.—Property of all kinds, including land of any tenure and also including money lent on mortgage and the securities therefor, may lawfully be given to charitable institutions by Will. The above forms can be readily adapted to such gifts by the substitution of a description of the land, mortgage, etc., for the words “ the sum of..... ”

A post-war credit may be bequeathed to the Institute, specifically, or as part of an estate.

Legacies may be left to form an endowment to be named after the benefactor or a nominee of the benefactor. In this case there should be added after the words, “ the sum of..... ”, “ to form an endowment to be called ‘ The.....Bequest.’ ”

The form of bequest should be incorporated in the Will, which should be signed and witnessed as shown on the back of this form.

If desired, the Institute is willing to act as Trustee.

1960

(Continued from other side)

When a Will has been made, and it is afterwards desired to benefit The Royal National Institute for the Blind, it will be sufficient if the form below is filled in, duly signed and witnessed as below, and placed with the existing Will.

This is a Codicil to the last Will of me

..... dated
 (Name in full) (Date of Will)

I give to THE ROYAL NATIONAL INSTITUTE FOR THE BLIND, of 224, 226 & 228 GREAT PORTLAND STREET, LONDON, W.1, for the general purposes of the Institute, the sum of

..... (£.....)
 (words) (figures)
 free of all death duties, and I declare that the receipt of the Hon. Treasurer for the time being of such Institute shall be a good discharge to my Executors.

In witness whereof I have hereunto set my hand this day
 of 19 ..

REPORT OF THE AUDITORS TO THE MEMBERS OF THE ROYAL NATIONAL INSTITUTE FOR THE BLIND

We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Institute so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from branches not visited by us. We have examined the above Balance Sheet and annexed General Charity Fund Account, which are in agreement with the books of accounts and returns. In our opinion, and to the best of our information and according to the explanations given us, the said Balance Sheet gives a true and fair view of the state of the Institute's affairs as at 31st March, 1960, and of the General Charity Fund Account. Parts I, II and III give a true and fair view of the transactions during the year ended on that date.

KENT HOUSE, TELEGRAPH STREET, E.C.2.
8th July, 1960

JACKSON, PINLEY & CO., Chartered Accountants,
Auditors.
